

Makyō Tech Rider

The band consists of 3 people:

Miguel – Electric Guitar and Main Vocals (stage front-left)

Tansel – Electric Bass and Backing Vocals (stage front-right)

Davide – Drums

Our audio requirements are very simple: A loud enough P.A. system (ringed-out and operational before soundcheck), 6 high-power floor monitor wedges (2 for Miguel and 2 for Tansel at front of stage, mostly for vocals and a little guitar and bass, plus 2 monitors with same output for Davide alongside drumkit).

A digital mixer with 12 channels or more; Drum mics (kick, snare, toms, overheads), Guitar mic (SM57), Bass (DI box), and 2 vocal mics (SM58) on boom stands at front of stage. We also need some electricity sockets (220V) on-stage to plug in our amps and pedals.

We need at least 30 mins sound-check prior to doors-open, and also at least 20 mins changeover time before the gig, although a line-check is fine if it's the event's *modus operandi* for all bands. Please contact Miguel if this is not possible so we can make other arrangements.

Lights can be anything the light technician wants. We play punk-rock! Go crazy!! Smoke machine and strobe are also fine, but just not too much please.

Backline: We need a 5-piece right-handed drumkit with 3 cymbal boom-stands and a bass amp. **Please let us know about bass amp choices you have available.** Guitarist brings his own valve guitar amp with clean and distortion channels and a foot-switch, but an in-house guitar amp would be handy as a backup, just in case. We also bring our own electric guitar, electric bass, jack-to-jack cables, and drum breakables (cymbals, snare, pedals, sticks).

Backstage: A safe space to keep our equipment before and after the gig. Also we do not carry a banner with us, however if there will be a projector, pls contact Miguel so he can send you a high-res animated band logo to show during the gig.

Thanks!
